

1. Declaration

I, Alan Jude Thomas, declare that this assignment, titled [Assignment Title], is my own original work and has not been copied from any other source except where explicitly acknowledged. I have not engaged in plagiarism, collusion, or any other form of academic misconduct in the preparation and submission of this assignment. All sources of information and data used in this assignment have been properly cited and referenced in accordance with the prescribed guidelines. I have not used unauthorized assistance in the preparation of this assignment and have not allowed any other student to copy my work. I am aware that any breach of academic integrity may result in disciplinary action as per the [policies of Monash University](#), which may include failing this assignment or the course, and further academic penalties.

2. Github Check

Enter your Github details here.

Github Username <i>Enter your username here</i>	atho0121
Repository Shared? <i>Have you started and shared your assignment repository with your tutor yet?</i>	yes

3. Self-Evaluation

Rate your performance for each criteria. Put a ☒ (tick) in the box where you think your work belongs.

Criteria	Exceeds Expectations	Meets Expectations	Needs Improvement	Fail to meet expectations
BR (A.1): Development Stack and Coding		☒		
BR (A.2): Responsiveness		☒		
BR (B.1): Validations		☒		

BR (B.2): Dynamic Data & Data Structure		✓		
---	--	---	--	--

4. Screen Recording of BRs

Create a 3 minute video showing your basic web application in action! Upload this video to your Google Drive and put the link here (ensuring that you have updated the access list so its not private).

 Basic Application Development (Version 1).mp4

5. Reflections: Challenges

What has been the most challenging part of this assignment for you? How has this stretched you as a programmer?

The most challenging part of this assignment was debugging the initial blank-page issue when first running the app. The dev server appeared to start correctly, but the page rendered blank with no obvious cause. Tracing it back required checking multiple layers: confirming I was running commands from the correct project directory (I had duplicate `package.json` files across nested folders), then discovering the actual root cause was an empty `router/index.js` file that meant `main.js` couldn't import a valid router instance. This taught me to read error messages more carefully (the browser console showed a specific "does not provide an export named 'default'" error that pointed directly at the problem) rather than assuming the issue was somewhere more complex. It also reinforced the importance of testing incrementally — checking the app in the browser after each meaningful change — rather than writing several files and only testing at the end. A secondary challenge was thinking through edge cases in form validation, such as realizing my initial phone number regex would incorrectly accept strings made entirely of dashes or spaces with no actual digits, which pushed me to add an explicit digit-count check on top of the pattern match.

6. Declaration: Additional Help

Any tools that you used (including Gen AI or existing code reuse) must be declared here.

Note: GenAI is not allowed for coding purposes in any assignment,

However, you may use GenAI for brainstorming, problem solving and learning. You need to declare all such uses here. One row per help used. More details on how to acknowledge the use of Gen AI can be found [here](#).

Name	Description
Claude	Used to explain Vue Router (<code>createRouter/createWebHistory</code>) concepts and help debug a blank-page rendering issue, by interpreting browser console error messages and reasoning through possible causes (duplicate <code>package.json</code> files,

	missing router export).
Claude	Used to review code I had already written (components, views, validation logic) for bugs and improvements .
